

Magna-Broom

Economy Magnetic Floor Sweeper

PATENTS PENDING

Model Shown
MB-12-RARE EARTH

Application: MPI's MAGNA-BROOMS are designed to help keep work areas cleaner and safer. They are designed to pickup ferrous metal debris and parts with its easy to use mechanism.

The new economy Magna-Broom features a low profile design making it maneuverable and easy to get under machines.

Popular uses include the collecting of:

- Metal turnings from floors in machine shops
- Steel stampings from around presses
- Hazardous nails and sharp ferrous metal objects

from driveways, walkways, and grounds of construction sites

The permanent magnet provides a powerful continuous magnetic field that reaches out and attracts ferrous metal from under and around the bottom of the sweeper, making clean-up faster.

Operation: Simply roll the broom over the area to be cleaned. As the strong magnetic field passes over the ferrous metal it will be drawn and attached to the bottom of the broom. To remove the collected metal just pull up on the broom's handle and deposit the collected debris into a desired container.
